

services

Every project is a custom project, and your needs and skills (and budget and timing) drive which of our skills may be appropriate for your project. Here's a sample of services we can provide:

- LiDAR Processing. We are experts at working to acquire and process millions of LiDAR data points into the data types you need for your maps.
- Basemaps. From data sourcing, contracting, and compiling through to a detailed basemap that's almost good enough to use in the field.
- Field checking. On the ground validation and correction of map data.
- Course design. Race course design and analysis to ensure a smoothly running event.
- Resource advice. Identifying natural and cultural resources that may require event modifications to ensure minimal adverse impacts.
- Souvenir products. Using maps as backgrounds for event souvenirs such as "photo-maps", "mug-maps", and "map T-shirts".
- Print products. We work with an extensive network of offset and digital printers to match your needs to the best print technologies, and ensure your maps are ready on schedule.
